Rain resistance through aqueous silicone resin emulsion

"Tego Phobe 1650" from Degussa Tego Coating & Ink Additives is an aqueous silicone resin emulsion for water-repellent treatment of silicone resin facade paints. According to the company, the emulsion provides very good early rain resistance without any need to increase the proportion of silicone resin in the formulation. The product imbues the facade paints with high water vapour permeability. Further properties imparted by the emulsion are wet abrasion resistance and a low tendency to dirt pick-up.
