1 Introduction and Basic Principles

1.1 Architectural coatings and binders
1.1.1 Polymer dispersions
1.1.2 Binder classes, polymerization and polyacrylates
1.1.3 Free-radical polymerization and emulsion polymerization
1.2 Polyacrylates; straight acrylics and styrene/acrylic copolymers
1.3 Film formation of polymer dispersions
1.3.1 Mechanism and minimum film forming temperature
1.3.2 Parameters determining the minimum film forming temperature
1.3.3 Cosolvents and plastisizers
1.3.4 Environmental aspects
1.4 Parameters and Properties of architectural coatings binders
1.4.1 Solids content
1.4.2 Coagulum
1.4.3 Particle size
1.4.4 Surface tension
1.4.5 Viscosity and rheology
1.4.6 Stability
1.4.7 pH-value
1.4.8 Residual monomers and volatiles
1.5 Parameters influencing binder properties during latex preparation
1.5.1 Monomer selection
1.5.2 Auxiliaries
1.5.2.1 Emulsifiers and protective colloids
1.5.2.2 Initiators and chain-transfer agents
1.5.2.3 Buffer substances and neutralizing agents
1.5.2.4 Preservatives
1.5.2.5 Defoamers
1.5.3 Polymerization control
1.5.4 Multi-phase systems
1.5.5 Seed polymerization
1.6 References

2 Formulation of aqueous architectural paints

2.1 Introduction
2.2 Requirements of a paint
2.3 Composition of architectural paints
2.3.1 Pigment volume concentration
2.3.1.1 Pigment binding power and critical pigment volume concentration
2.3.1.2 Methods of determining the critical pigment volume concentration
2.3.2 Interior and exterior paints
2.4 Formulation constituents of an emulsion paint
2.4.1 Paint binder
2.4.1.1 General requirements
2.4.1.2 Saponification resistance
2.4.1.3 Water resistance of the polymer film
2.4.1.4 Water vapour permeability of the polymer film
2.4.2 Pigments
2.4.2.1 Titanium dioxide
2.4.2.2 Other pigments
2.4.3 Fillers
2.4.4 Additives
2.4.4.1 Film-forming aids
2.4.4.2 Thickeners
2.4.4.3 Wetting agents and dispersing resins
2.4.4.4 Defoamers
2.4.4.5 Preservatives
2.5 References

3 Primers
3.1 Definitions and requirements
3.2 Aqueous primers based on acrylic dispersions
3.3 Formulation of primers
3.4 Test methods
3.5 References

4 Exterior paints on mineral substrates
4.1 Introduction
4.2 Masonry Paints
4.2.1 Introduction
4.2.2 Significance of natural weathering
4.2.2.1 Whitestone test
4.2.2.2 Comparison with artificially weathered coatings
4.2.2.3 Comparison of binders
4.2.3 Summary
4.2.4 Solvent containing masonry coatings
4.2.4.1 Laboratory test methods on masonry coatings
4.2.4.2 Natural weathering on masonry paints
4.2.4.2.1 Effect of binder type and pigment volume concentration
4.2.4.2.2 Effect of pigment/extender ratio on weathering properties
4.2.4.2.3 Effect of extender type
4.2.4.3 Summary
4.2.5 Masonry paints formulated without sovent
4.2.5.1 Paint formulations and pigments used
4.2.5.2 Brightness as function of the binder and TiO2type
4.2.5.3 Results of artificial weathering of the paints
4.2.5.3.1 Colour changes in artificial weathering
4.2.5.3.2 Chalking
4.2.5.4 Outdoor exposure of masonry paints
4.2.5.4.1 Colour changes after 2 years of outdoor exposure
4.2.5.4.2 Chalking after 2 years outdoor exposure
4.2.5.5 Summary
4.2.6 Masonry paints formulated at high PVC
4.2.6.1 Paint formulated
4.2.6.2 Results on laboratory tests
4.2.6.3 Outdoor weathering results
4.2.6.3.1 Colour changes due to outdoor exposure
4.2.6.3.2 Chalking due to outdoor exposure
4.2.6.4 Summary
4.2.7 Formulations based on styrene/acrylic-dispersions
4.2.8 Formulations based on pure acrylic-dispersions
4.2.9 House Paints
4.2.10 Stainers and deep tone paints
4.2.10.1 Production
4.2.10.2 Suggestions for the formulation
4.2.11 Comparison of different masonry paint systems
5 Wood coatings
5.1 Special features of wood as a building material
5.2 Classification of wood coatings
5.2.1 Primers/Impregnating stains
5.2.2 Stain blocking primers
5.2.3 Exterior topcoats
5.2.3.1 Woodstains
5.2.3.2 Opaque coatings; waterproofing paints
5.2.4 Binders for wood coatings
5.2.5 Interior wood finishes
5.3 References

6 Gloss emulsion paints
6.1 Introduction and requirements
6.2 Gloss and Haze
6.3 Binders for gloss emulsion paints
6.3.1 Binders and gloss
6.3.2 Titanium dioxide and gloss; effect of the dispersing operation
